RediRoot Plastic Aeration Propagation + fertil

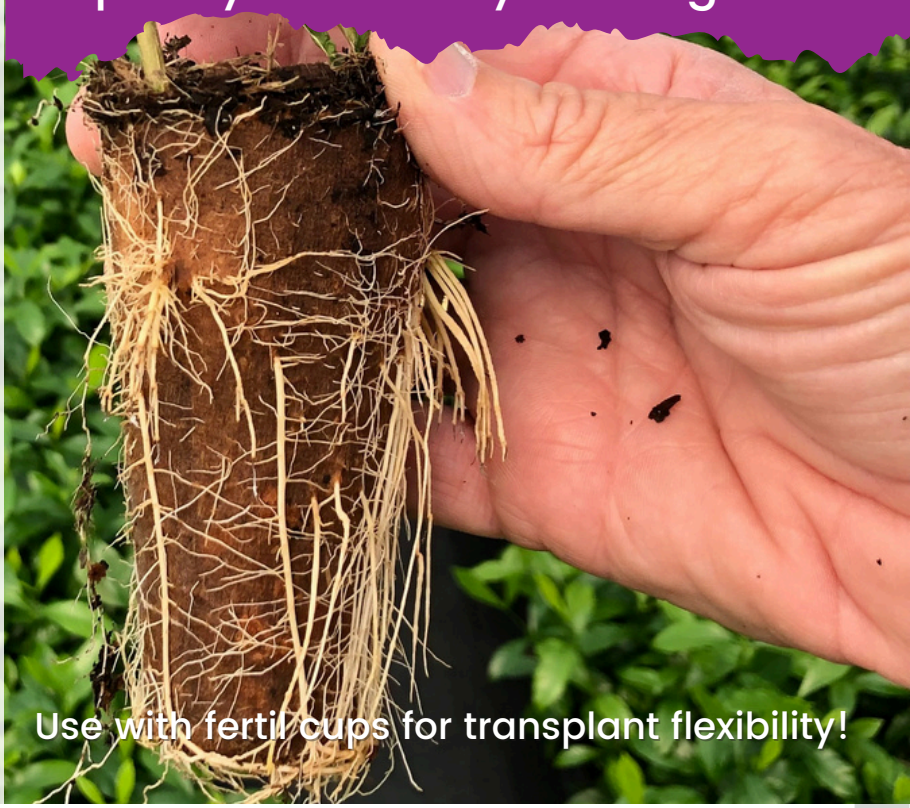

REDIROOT

Most prop trays produce circling roots and overly compacted, swampy soil.

RediRoot Aeration Propagation Trays eliminate root circling through air pruning, allowing for development of dense, fibrous roots, reduced transplant shock and satisfied customers.

Prop Trays That Defy Circling Roots

RediRoot ® is proud to partner with FERTILPOT to offer an easy and sustainable transplant solution for your propagation needs. FERTILPOT propagation cups are for use in our RediRoot ® propagation trays for the purpose of reducing transplant shock without compromising air pruning technology.
